COMPONENTS OF A LARGE METER

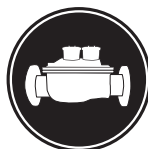

ONGOING MAINTENANCE

To avoid an interruption to your water service, ongoing maintenance is extremely important.

Open and close your valves at least once a year to ensure they are in working order.

Maintain clear access to the water meter.

Clear the chamber from any accumulated debris annually.

BACKFLOW PREVENTION PROGRAM

By-law No.10-103 is designed to safeguard the quality and distribution of the City of Hamilton's drinking water by requiring protection measures for all industrial, commercial, institutional, and multi-residential properties that are four storeys or higher. Without proper safeguards, backflow conditions could allow contaminants from these properties to enter the drinking water system, posing a risk to public health and safety.

Self-Assessed Survey

If your property was built before 2014 and has a water service line 38 mm (1.5 inches) or smaller, you must complete a Self-Assessed Survey every five years. This will determine the level of backflow risk associated with your property. There is no cost for completing this survey.

Cross-Connection Survey

Property owners with a water service line entering their property that is 50mm or larger or properties deemed to pose a significant risk are required to complete a Cross-Connection Survey once every five years.
